Infants, young children and pregnant √ women are typically more vulnerable to lead in drinking water than the general population. It is possible that lead levels at your home may be higher than at other homes in the community as a result of materials used in your home's plumbing. If you are concerned about elevated lead levels in your home's water, you may wish to have your water tested. Flushing your tap for 30 seconds to 2 minutes before using your tap water will clear the line of any lead that may have leached into the water while the line was idle. Additional information is available from the Safe Drinking Water Hotline (800-426-4791) or the Department of Health and Human Services /division of Public Health/Office of Drinking Water (402-471-2541).

City of Crete

Annual Water Quality Report

for the period of January 1 to December 31, 2016

Quality Our Commitment Our Profession

This report is intended to provide you with important information about your drinking water and the efforts made by the City of Crete water system to provide safe drinking water.

If you would like to observe the decisionmaking processes that affect drinking water quality, please attend the regularly scheduled meeting of the Crete City Council. If you would like to participate in the process, please contact Jerry Wilcox, City Clerk, at (402) 826-4313 to arrange to be placed on the agenda of the next regularly scheduled meeting of the Crete City Council.

This report will not be mailed but copies of this report are available to the public upon request. This report is also available on the City of Crete website at http://www.crete-ne.gov.

Para Clientes Que Hablan Español:

Este informe contiene información muy importante sobre el agua que usted bebe. Tradúzcalo ó hable con alquien que lo entienda bien.

2016 Annual Water Quality Report - City of Crete

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water

poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline (800-426-4791).

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Source Water Assessment Availability

The Nebraska Department of Environmental Quality (NDEQ) has completed the Source Water Assessment. Included in the assessment are a Wellhead Protection Area map, potential contaminant source inventory, vulnerability rating, and source water protection information. To view the Source Water Assessment or for more information please contact the person named on the back cover of this report or NDEQ at (402) 471-6988 or go to www.deg.state.ne.us.

Sources of Drinking Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and groundwater wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

The source of drinking water used by the City of Crete is groundwater.

Contaminants that may be present in source water include:

* Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.

- * Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming.
- * Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential
- * Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- * Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

Drinking Water Health Notes

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791) or the Department of Health and Human Services, Division of Public Health, Office of Drinking Water at 402-471-2541

The City of Crete is required to test for the following contaminants:

......

Coliform Bacteria, Antimony, Arsenic, Asbestos, Barium, Beryllium, Cadmium, Chromium, Copper, Cyanide, Fluoride, Lead, Mercury, Nickel, Nitrate, Nitrite, Selenium, Sodium, Thallium, Alachlor, Atrazine, Benzo(a)pyrene, Carbofuran, Chlordane, Dalapon, Di(2-ethylhexyl)adipate, Dibromochloropropane, Dinoseb, Di(2-ethylhexyl)phthalate, Diquat, 2,4-D, Endothall, Endrin, Ethylene dibromide, Glyphosate, Heptachlor, Heptachlor epoxide, Hexachlorobenzene, Hexachlorocyclopentadiene, Lindane, Methoxychlor, Oxamyl (Vydate), Pentachlorophenol, Picloram, Polychlorinated biphenyls, Simazine, Toxaphene, Dioxin, Silvex, Benzene, Carbon Tetrachloride, o-Dichlorobenzene, Para-Dichlorobenzene, 1, 2-Dichlorethane, 1,1-Dichloroethylene, Cis-1, 2,-Dichloroethylene, Trans-1,2-Dichloroethylene, Dichloromethane, 1,2-Dichloropropane, Ethylbenzene, Monochlorobenzene, 1,2,4-Trichlorobenzene, 1,1,1-Trichloroethane, 1,1,2-Trichloroethane, Trichloroethylene, Vinyl Chloride, Styrene, Tetrachloroethylene, Toluene, Xylenes (total), Gross Alpha (minus Uranium & Radium 226), Radium 226 plus Radium 228, Sulfate, Chloroform, Bromodichloromethane, Chlorodibromomethane, Bromoform, Chlorobenzene, m-Dichlorobenzene, 1,1-Dichloropropene, 1,1-Dichloroethane, 1.1.2.2-Tetrachlorethane, 1.2-Dichloropropane, Chloromethane, Bromomethane, 1,2,3-Trichloropropane, 1,1,1,2-Tetrachloroethane, Chloroethane, 2,2-Dichloropropane, o-Chlorotoluene, p-Chlorotoluene, Bromobenzene, 1,3-Dichloropropene, Aldrin, Butachlor, Carbaryl, Dicamba, Dieldrin, 3-Hydroxycarbofuran, Methomyl, Metolachlor, Metribuzin, Propachlor

How to Read the Water Ouality Data Table:

The EPA and State Drinking Water Program establish the safe drinking water regulations that limit the amount of contaminants allowed in drinking water. The table show the concentrations of detected substances in comparison to the regulatory limits. Substances not detected are not included in the table. The state requires monitoring of certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Therefore, some of this data may be older than one year.

MCL (Maximum Contaminant Level): The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

MCLG (Maximum Contaminant Level Goal): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

AL (Action Level) The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

MRDL (Maximum Residual Disinfectant Level) The highest level of a disinfectant allowed in drinking water.

RAA (Running Annual Average) An ongoing annual average calculation of data from the most recent four quarters.

90th Percentile - Represents the highest value found out of 90% of the samples taken in a representative group. If the 90th percentile is greater than the action level, it will trigger a treatment or other requirements that a water system must follow.

N/A - Not applicable.

ND - Not detectable

TEST RESULTS (COLLECTED IN 2016 UNLESS NOTED)

Microbiological H		ighest No. of Posi	MCL	CL MCLC		ì	Likely Source of		Contamination	Violations Present		
No Detected Results were F	ound in the C	alendar Year of 2016			•			•				
Contaminant (Lead and Copper) Range		ge Action L	Action Level (AL)		90th Percentile		# Sites Ov		Over AL Likely Source of Contaminant			
Copper, Free 2014 - 2016 0.022-0.22			ppm	0.203 ppm		0		Erosion of natural deposits; Leaching from wood preservative Corrosion of household plumbing.				
Lead 2014 - 2016 0.693		4.57 15	opb	2.86 ppb		0						
Regulated Contaminan	ts											
Contaminant	Highest Leve Detected	Range of Levels Detected	Units	MCLG	MCL	Vi	iolation	Likely Source of Contamination				
*Arsenic (6/14/2016)	4.87	4.14 - 4.87	ppb	0	10		No	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes				
Barium (7/27/15)	0.117	0.098 - 0.117	ppm	2	2		No	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits				
Chromium (7/27/15)	8.06	2.49 - 8.06	ppb	100	100		No	Discharge from steel and pulp mills; Erosion of natural deposits				
Fluoride (7/27/15)	0.288	0.271 - 0.288	ppm	4	4		No	Erosion of natural deposits; Water additive which promotes strong teeth; Fertilizer discharge				
Nitrate-Nitrite (12/12/16)	1.61	0.0824 - 1.61	ppm	10	10		No	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits				
Radiological Contamina	nts											
Contaminant		Collection Date	Highest Value	Range	Unit		MCL	MCLG	Likely Source of Contamination

70

70

pCi/L: picoCuries per liter - Radioactivity concentration unit.

ug/L: micrograms per liter - Measurement of radioactivity

Sulfate

ppb: parts per billion - One ppb corresponds to 1 gallon of water in 1,000,000,000 gallons of water

ppm: parts per million = mg/L (milligrams per liter) One ppm or one mg/L corresponds to 1 gallon of water in 1,000,000 gallons of water.

08/08/2016

TT: (Treatment Technique) - A required process intended to reduce the level of a contaminant in drinking water.

The City of Crete had **0 (zero)** violations in the calendar year of 2016

250

mg/L

^{*}While your drinking water meets EPA's standard for arsenic, it does contain low levels of arsenic. EPA's standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. EPA continues to research the health effects of low levels of arsenic which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.
